

Axa Basta **Dynamo light system** \$137 as shown

As you pedal, the Dynamo's six-volt hub rolls against your tire; the friction creates electricity, which powers the Pilot Steady LED in front and the red Ray Steady in back. Setup takes some effort—plan on a half hour if you're comfortable splitting wire—and can be finicky if not properly grounded. The system, once installed, is sturdy and reliable. **BUY IT:** If you're a year-round commuter **FORGET IT:** If you dislike any extra weight on the bike **WEIGHT:** 550g **LIGHT OUTPUT:** 1.3 lumens **FEATURES:** Six-volt, 3-watt hub mounts to left fork or seatstay; rear light attaches to either rack or seatpost mount (\$8) **INFO:** axa-basta.nl—*David Howard*
