

Jittery Joe's mechanic Jon Erwin
Talks about the GiustaForza
(April 2008)

"I have to say this is a very cool tool. Most bicycle torque wrenches are too bulky and the ranges of torque are completely wrong for bikes but this thing was almost perfect. I think the directions need to tell you to wind the tool back to zero* when your done with it or else the torque values become incorrect (Airplane mechanic nerd) but other than that this thing rocks! Are they making any other bike tools?"

- Jittery Joe's Team
Mechanic - Jon Erwin

*[CantitoeRoad note: Every Effetto Mariposa GiustaForza torque wrench is supplied with instructions and a warning, highlighted in red (in 15 languages) that reads: "After use, set the tool at the minimum torque." And yes, Jon, more Effetto Mariposa precision bicycle tools are on the way!]
